

PLUSQUEUE

Secretary User Manual

A short desk guide for the secretary role in PlusQueue (the clinic queue web app).

You only see **your assigned branch**. Other clinics do not appear.

Screenshots: Real captures were not taken (the app has no mock/test data mode, and screenshots would show live clinic records). Each section has a labeled placeholder. Replace it with a photo later.

How to move around

After you sign in, use the left menu (computer) or the bar at the bottom (phone):

Menu item	What it is
Dashboard	Today's summary
Schedules	Create, publish, and start clinic days
Validate Reservation	Check in a parent with QR or a code
Manage Queue	Run the live line
Profile	Your account, walk-in patients, settings, log out

On a phone, Validate Reservation is shortened to **Validate**, and Manage Queue is shortened to **Queue**.

Live Queue Monitor is a large waiting-room screen. Open it from Manage Queue (it opens in a new tab).

1. Logging In

Sign in with the email (or phone) and password given to you by the administrator.

1. Open the app in a browser.
2. Type your **email or phone number**.
3. Type your **password**.
4. Click **Sign In**.
5. You are taken to Dashboard.

Do not use **Create Account** on the sign-in screen. That is for parents. Staff accounts are created by the administrator.

2. Manage Queue overview

This is the desk screen for the **live line** (who is waiting, who is with the doctor, and who is next).

It only works after you or the doctor starts the queue for today (see [Start the queue](#start-the-queue)). If no queue is running, you will see **No Active Queue For** your branch.

You will see:

- **Session controls** — pause, close, or end the clinic day
- **Session Duration** — how long the queue has been running
- **Request Check-In** — pings the next parent who is not yet at the desk
- **Total Active** — how many people are waiting or with the doctor
- **Current Consultation** — the patient with the doctor
- **Waiting Queue** — everyone still in line, in current turn order

Each row shows a **queue number** (the ticket number on the parent's reservation). That number does not change. The **order of the list** can change if someone is marked late.

Tap a patient row to see parent contact details (or walk-in details, including optional parent name and phone if they were entered).

3. Adding a Walk-in Patient

Add a child who has **no parent app account** (they walked in, or a parent called the clinic). They are checked in right away — no QR scan.

1. Open **Profile**.
2. Click **Walk-in Patient**.
3. Choose a **schedule** from the dropdown (date, hours, and how many slots are left). The list includes **Upcoming** published schedules and queues already **Active Now** or **Paused**. Closed or ended clinic days do not appear.
4. Optional: type **Parent's Name** and **Parent's Phone** (10 digits after +63). Use this for phone-in bookings so the clinic can text them. Leave blank for in-person walk-ins.
5. Type **how many children** (1–10). One walk-in group uses **one slot**.
6. For each child, fill in **name**, **age** (1–25), and **sex**.
7. Optional: type the **concern** (reason for visit).
8. Click **Check In Walk-in**.

The patient appears in Manage Queue with a **Walk-in** tag. On an Active Now or Paused queue, they join **at the back of the live line** (they get the next ticket number and wait their turn). They do not skip people already waiting.

If you entered a phone:

- **Upcoming** schedule → they get the usual reservation-details text.
- **Active Now** or **Paused** queue → they get the “active queue” text (queue number and position).

That phone is used **only for this booking text**. Walk-ins do not get later texts such as queue started, near turn, penalty, or forfeiture.

The screenshot shows a mobile application interface. In the background, there is a 'Profile' page with a sidebar menu containing 'Dashboard', 'Schedules', 'Validate Reservation', 'Manage Queue', and 'Profile' (which is highlighted). Overlaid on top of this is a 'Walk-in Patient' form. The form has a title bar with a close button (X). It contains four sections: 1. 'Select schedule' with a dropdown menu labeled 'Select a schedule'. 2. 'Parent contact (optional)' with a note 'Fill these in for phone-in bookings so the clinic can text reservation details. Leave blank for in-person walk-ins.' It includes fields for 'Parent's Name' (with an 'Optional' label), 'Parent's Phone Number' (with a phone icon and the number '+65 9123456789'), and '3. How many children will be checked in?' (with a value of '1'). 4. 'Child details' for 'CHILD 1', including 'Child Name' (with a red asterisk), 'Age' (with a red asterisk and a 'Yrs' label), and 'Sex' (with a red asterisk and a 'Select' dropdown). At the bottom of the form are 'Cancel' and 'Check In Walk-in' buttons.

4. Validating / scanning a parent's QR code

This checks a **parent reservation** at the desk so they join the live line as “Checked In.”

The clinic queue must already be **started**. If it is not, you will see “Clinic Queue Not Started.”

Check-in still works while the queue is **paused**, and after it is **closed to new bookings** (existing tickets stay valid).

1. Open **Validate Reservation**.
2. The camera usually starts by itself. Point it at the parent's QR code, **or** type their **6-character code**.
3. The code checks itself when all 6 characters are entered.
4. On success, you see the child's name and queue number. Click **OK**.

If the camera does not start, click **Start Camera**. Allow camera access if the browser asks. Click **Stop Camera** if you need to turn it off.

If several cameras appear, pick the one facing the parent (usually the back camera on a phone).

Common results

Message	Meaning
Patient Checked In Successfully	Done
Invalid Code	Code not found, or it belongs to another branch
Already Checked In	Already scanned
Patient Currently In Consultation	They are already with the doctor
Clinic Queue Not Started	Start today's queue from Schedules first
Queue Closed	The clinic day already ended (not the lock button)

5. Penalizing a late parent

Use this when the **next person in line** is not at the desk when called.

Penalize = move them back in line and start a late clock. If they still do not check in before the clock runs out, they **lose the slot** (forfeited).

1. Open **Manage Queue**.
2. Find the waiting row with the **Penalize** button. It appears on:
 - the first parent who is **not checked in**, or
 - a **walk-in** who is first in line (even though walk-ins are already checked in).
1. Wait until the button is ready. It may count down first (grace time so a parent walking in is not marked late too quickly).
2. Click **Penalize**.

What you will see

- They drop several places down the list (how many is set in System Configuration).
- A **Forfeit in ...** timer appears on their row.
- **Parent app bookings:** if they check in (QR/code) before time runs out, they stay in line at the new place and the timer stops.
- **Walk-ins:** they are already checked in, so they cannot scan again to stop the timer. Send them to the doctor before time runs out, or they lose the slot.
- If time runs out, they are removed from the line automatically.

You can penalize the same person more than once. Extra penalties move them back again but **do not restart** the first timer.

If Penalty Move-Back is set to **0**, clicking Penalize **removes them immediately** (no move-back, no timer).

6. Cancelling a walk-in reservation

You can cancel **walk-in** tickets only. Parent app reservations cannot be cancelled from the secretary desk.

1. Open **Manage Queue**.
2. Click the walk-in patient's row.
3. Click **Cancel Reservation**.
4. Click **Cancel Reservation** again to confirm.

The slot opens up and the line updates.

Do not cancel a walk-in who is already **with the doctor**. Finish that visit first.

7. Pause, resume, close, and end the clinic session

These buttons sit at the top of **Manage Queue**. The doctor has the same four actions on Queue.

Button	What it does
Pause (pause icon)	Temporarily stop the live session. Check-in can still happen.
Play (play icon)	Resume after a pause.

Button	What it does
Lock (lock icon)	Close the queue to new reservations. People already in line keep their place. Consultations continue. You can still check in existing tickets. You cannot add new walk-ins.
Stop (square icon)	End the clinic day. Only works when nobody is waiting and nobody is with the doctor.

Closing the queue **cannot be undone**. After you lock it, the pause/play buttons go away. Only **End Clinic Session** remains. Parents cannot book that schedule again.

You can also lock the queue while it is paused.

Pause

1. On Manage Queue, click the **pause** button.
2. Status shows **Paused**.

Resume

1. Click the **play** button.
2. Status shows **Active Session** again.

Close the queue to new reservations

1. Click the **lock** button.
2. Read the confirmation.
3. Click **Close Queue**.

End the clinic session

1. Finish remaining patients first (empty waiting list, empty consultation room).
2. Click the **square** button.
3. Click **End Clinic Session**.

This finishes the schedule for the day.

8. Publishing a reservation schedule

A **schedule** is a clinic day (date, hours, how many slots). Parents can book only after you **publish** it.

You only create schedules for your assigned branch. Clinic hours are filled in automatically from that branch's opening and closing times. You cannot type different hours here.

You cannot create two schedules for the **same branch on the same date**.

Create a draft

1. Open **Schedules**.
2. Click the round + button (bottom right).
3. Confirm the **branch** (locked to yours).
4. Pick the **clinic date**.
5. Check that **Clinic Hours** appear.
6. Type **slot capacity**.
7. Click **Create Schedule**.

A draft is not visible to parents yet.

You can search schedules or filter by Draft / Published / Completed.

Publish

1. On the draft card, click **Publish**.
2. Review the details.
3. Click **Publish Schedule**.

Parents can now reserve slots.

Drafts can also be **Edited** or **Deleted**.

Start the queue

Start when the floor is ready (desk check-in, sending patients to the doctor).

1. On the published card, click **Start Queue**.
2. Review the details.
3. Click **Start Queue**.
4. You are taken to Manage Queue.

You can run only **one** live queue at a time. End the current one before starting another. A yellow note appears on Schedules if a queue is already running.

After the queue is running (or closed to new bookings), click **Manage Queue** on the card to jump back to the desk screen.

9. System Configuration settings

These rules apply **only to your branch**. Open them from **Profile → System Configuration**.

The page shows which branch you are configuring. Save Queue Rules and SMS Settings **separately**.

Queue Rules

Setting	What it controls
Penalty Move-Back (0–10)	How many places a late parent is moved down the line. 0 means Penalize removes them immediately.
Penalty Grace Period (0–5 min)	How long after someone becomes next in line before Penalize is available.
Penalty Timer (5–30 min)	After Penalize, how long they have to check in before they lose the slot.

Click **Save Queue Rules**.

SMS settings

These are the text messages parents receive. Walk-in phone numbers are **not** used for these later messages (only the one booking text in [Adding a Walk-in Patient](#3-adding-a-walk-in-patient)).

Setting	What it controls
Near Turn — Patients Ahead (1–10)	Send the “your turn is near” text when this many people (or fewer) are still ahead. Each reservation gets this text only once.
Near Turn Message	The text of that reminder.
Reservation Confirmed Message	Text after a parent books, before the queue has started.
Active Queue Reservation Message	Text instead, if they book after the queue has already started.
Penalty Message	Text when someone is marked late.
Forfeiture Message	Text when they lose the slot for being too late.
Queue Started Message	Text when you start the queue for the day.

Gray buttons like {queueNumber} insert that detail into the message. A character count appears under each message. Click **Save SMS Settings**.

Queue Rules

These values control how penalties and late forfeiture work for this branch only.

Penalty Move-Back (0-10)

How many queue positions a parent is moved backward on each penalty. Setting this to 0 forfeits them immediately.

Penalty Grace Period (0-5 min)

How long after a parent becomes next in line before Penalize is available. Protects parents who are walking in as they are called.

Penalty Timer (5-30 min)

After Penalize, the parent must validate their QR within this time or they are forfeited. Later penalties keep the first expiry.

SMS Notification Configuration

Templates and near-turn timing for parents at Magalong Branch only. Parents who already received a near-turn SMS will not be notified again for the same reservation.

Near Turn — Patients Ahead

Send the near-turn SMS when this many patients or fewer remain ahead (1-10). Each reservation receives this SMS only once.

Near Turn Message

Default: Only {count} patients ahead (Queue #{queueNumber}). Please head to the clinic now.

{count}

{queueNumber}

Active Queue Reservation Message

Sent instead of the confirmed-reservation message when the parent books after the queue has already started.

10. Other secretary tools

Dashboard (Home)

First screen after login. Shows today's published schedule, who is with the doctor, counts (Remaining Queue / Waiting / Checked In / Completed), and recent activity.

On a **wide computer screen**, a compact Manage Queue also appears here. On a phone, use the **Queue** tab instead.

Request Check-In

On Manage Queue, click **Request Check-In** to remind the next parent who is not yet checked in to come to the desk. There is a short wait (about 30 seconds) before you can send another reminder.

Send to Doctor

When the consultation room is empty, the **first waiting patient** who is **Checked In** gets a **Send to Doctor** button.

1. Confirm they are ready.
2. Click **Send to Doctor**.

Only **one** patient can be with the doctor at a time. The button appears again after the doctor finishes.

Live Queue Monitor

A large screen for the waiting room: **Now Serving** and **Next In Queue** (queue numbers only, no names). It also shows the branch name and the current time. Up to 10 waiting numbers are listed.

1. On Manage Queue, click **Live Queue Monitor**.
2. Optionally click the fullscreen button.

Paused and closed queues show a banner at the top (**Queue Paused** or **Queue Closed**).

Profile and log out

Profile shows your name, email, phone, and assigned branch. You cannot edit these here. Ask the administrator if something is wrong.

1. Open **Profile**.
2. Click **Log Out**.
3. Confirm.
